

### **Scanning & the Trunking System:**

A reminder to all users of the Iowa County Public Safety Communications System. If you set your radio to scan multiple talkgroups, you will likely miss pieces of conversations. You cannot have a priority talkgroup and because scanning a trunking system requires more processes for the radio to perform, if you are scanning, you are taking a chance that you will miss radio traffic. If you really need to scan, I would suggest you purchase a scanner with a 12v converter and mount it in your vehicle. If you are interested in scanning surrounding counties, with the exception of the new DaneCom system, all are analog on their primary frequencies. A standard analog scanner or analog (but narrowbandable) mobile radio would work for this.
